
SURVEYING STUDENTS: UNDERSTANDING YOUTH BEHAVIORS TO MAKE INFORMED DECISIONS

Anonymous surveying of youth is needed in order to:

- **Understand** risk behaviors that lead to adverse health and social outcomes.
- **Assess** whether risk behaviors change over time.
- **Provide data** to inform policy and programming.
- **Evaluate** prevention programs to make sure they are working.
- **Be eligible for funding** for prevention programming in schools.

Most states conduct the YRBS

- The majority of states already use the Youth Risk Behavior Survey (**YRBS**) including the sexual risk behavior questions.
- In 2013, 42 states participated in the YRBS, including Louisiana and nearby states such as Mississippi and Alabama.
- **Louisiana is one of four states** that did not include the sexual risk behavior questions.

What is the YRBS?

- A school-based survey developed by the CDC and conducted every two years.
- The survey is conducted by the Department of Education in high schools throughout Louisiana.
- The YRBS monitors health risk behaviors that often lead to death and disability among youth:
 - Alcohol & Drug use
 - Tobacco use
 - Injuries & Violence
 - Nutrition
 - Physical Activity
 - **Sexual Risk Behavior**
- The survey is voluntary. Districts, schools, parents, and students all must agree to participate.
- The survey is **anonymous** and data is compiled at the state level; **data will never be reported for an individual student.**

Learn more about the YRBS at www.cdc.gov/yrbs.

ADOLESCENT SEXUAL & REPRODUCTIVE HEALTH IN LOUISIANA

Adolescent reproductive health is a critical, yet often neglected issue in Louisiana. Louisiana youth rank amongst the highest in the nation for teen births and sexually transmitted infections.¹

We Don't Know if Louisiana Follows National Trends

- According to the Youth Risk Behavior Survey (YRBS), there was a 16% increase from 1991 to 2013 in the number of high school students nationwide who had never had sexual intercourse.²
- Louisiana students are not included in this data, so we don't know if this trend holds true for young people in our state.
- From 1991 to 2013, the national teen birth rate dropped 57%, while the rate in Louisiana for the same time period dropped only 48%.³

We need to be able to anonymously survey Louisiana students about sexual risk behaviors to fully understand the poor sexual and reproductive health outcomes faced by adolescents in our state.
